

Q # 1: Write a program that inputs age in years and displays age in months and days.

```
#include <iostream>
using namespace std;
int main() {
    cout << "Name :Muhammad Ibrahim khan  Sap:72404 " << endl;
    int years ;
    cout << "Enter your age in years:" ;
    cin >> years;
    int months= years*12;
    int days= years *365;
    cout << "your age in months is;" << months << endl;
    cout << "your age in days is; " << days << endl;
    return 0;
}
```

Output

Clear

Name:Muhammad Ibrahim khan Sap:72404

Enter your age in years:65

your age in months is;780

your age in days is; 23725

Q #2 Write a program that inputs 4 numbers and calculates the sum, average, and product of all the numbers.

```
#include <iostream>
using namespace std;

int main(){
    cout << "Name :Muhammad Ibrahim khan Sap:72404 " << endl;
    int n1,n2,n3,n4;
    cout << "Enter your First number :";
    cin >> n1;
    cout << "Enter your second number :";
    cin >> n2;
    cout << "Enter your third number :";
    cin >> n3;
    cout << "Enter your Fourth number :";
    cin >> n4;
    int sum=n1+n2+n3+n4;
    int product=n1*n2*n3*n4;
    float average=sum/4.0 ;
    cout << "Sum of your given number is ;" << sum << endl;
    cout << "product of your given number is ;" << product << endl;
    return 0;
}
```

Output

```
Name :Muhammad Ibrahim khan Sap:72404
Enter your First number :34
Enter your second number :4
Enter your third number :4
Enter your Fourth number :5
Sum of your given number is ;47
product of your given number is ;2720
Average of your given number is 11.75
```

**Q # 3: Write a program that inputs miles from the user and convert miles into kilometres.
One mile is equal to 1.069 kilometer.**

```
#include <iostream>
using namespace std;
int main(){
float miles;
cout<<"Enter miles : ";
cin>>miles;
float kilometer=miles*1.069;
cout<<"miles in kilometer ="<<kilometer<<endl;
    return 0;
}
```

Output

```
Enter miles 95
miles in kilometer =101.555
```

Q # 4: Write a program that inputs total number of students in a class and fee per student. It displays total fee collected from the class.

```
#include <iostream>
using namespace std;
int main() {
    int students;
    cout << "Name :Muhammad Ibrahim khan Sap:72404 " << endl;
    cout << "Enter total number of students :";
    cin >> students;
    int fee;
    cout << "Enter fee per student : ";
    cin >> fee;
    int total_fee = fee * students;
    cout << "Total fee collected from class is " << total_fee << endl;
    return 0;
}
```

Output

```
Name :Muhammad Ibrahim khan Sap:72404
Enter total number of students :65
Enter fee per student : 5000
Total fee collected from class is 325000
```
